

a

Hypothesis: endothermy weakens the environmental control of assemblage traits

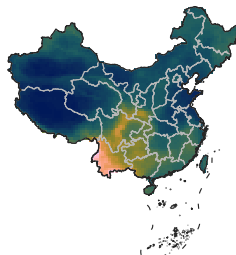

**b**

2,837 species in the assemblage matrix, 3,782 analysable cells of 50 km

**c****Birds**

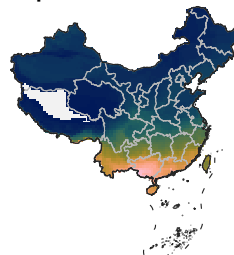

Species richness

100 200 300 400

d**Mammals**

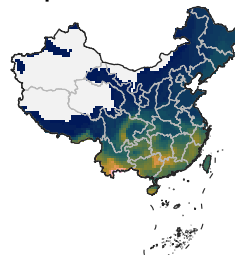

Species richness

40 80 120 160

e**Reptiles**

Species richness

25 50 75 100 125

f**Amphibians**

Species richness

20 40 60
